

We're working to keep your sewers flowing!

March 15 to June 30 2016

The main sanitary sewers serving your neighborhood are being lined to ensure uninterrupted sewer service for years to come. Sewer gases have corroded these lines to the point where they could fail sometime in the near future. This new lining is corrosion proof and is installed with no digging and with very little disruption of service. Once these linings are installed your house will have safe and reliable service for years to come. This work will occur over the next 3 months and may cause some minor traffic impacts and short term limitations to sewer service in your neighborhood. Additionally, the curing process for this lining can take up to 24 hours and may require overnight work on a limited basis. During the course of the project some of the manholes in area homes will have to be accessed. The city apologizes for any inconveniences this may cause. On a positive note, there will not be any charges or fees to the residents of the area, nor a sewer rate increase associated with this project.
